

IoT Prototype with Arduino

Temperature & Humidity Monitoring System

Prepared for Academic Submission

Abstract

This project measures temperature and humidity using a DHT11 sensor connected to an Arduino Uno and displays the readings through the Serial Monitor.

Components

Arduino Uno
DHT11 Sensor
Breadboard
Jumper Wires

Circuit Connections

VCC→5V, GND→GND, DATA→Digital Pin 2

Arduino Code (summary)

Initialize DHT11, read temperature and humidity every 2 seconds, print values to Serial Monitor.

Expected Output
